SUMMARY OF AUGUST WATER QUALITY SAMPLING

Sampling for August 2018 occurred on the thirty-first of July and was considered a base flow collection. Water samples were collected at eight locations, with the exception of CC-1 due to inaccessibility from road construction, and LT-1 due to dry conditions. Discharge was not measured this month as a result of low water levels, where the stage measurements were at or below base flow conditions. Mesonet data shows no precipitation occurring on the thirty-first, 2.20 inches of precipitation in the 72 hours prior to sampling, and no precipitation in the 72 hours after the sampling event. The total rainfall amount in Norman for the month of August was 6.87 inches. All water level gauges were operational for the month, with the exception of CC-1 as a result of road construction activity.

Table 3 QA/QC Data

Quality assurance/quality control (QA/QC) of the data includes a field blank and duplicate sample from each collection event, and is qualified by the OWRB. Relative Percent Difference (RPD) of the duplicate sample can be categorized into four levels, where Level 1 likely has no QA issues and Level 4 has major QA issues, and should be used with caution.
